

Quick Start Guide

STEP 1: BEFORE DISCARDING PACKAGING, please make sure to remove all accessories.

STEP 2: Fully charge your Justin by plugging the Micro-USB end of the supplied charging cable into the Micro-USB port of Justin. Plug the USB end of the charging cord into the USB wall charger and then plug into a wall outlet and Justin will automatically begin charging. **Please Note:** A typical charge from 0% to 100% will take approximately 14 hours. Since your Justin is partially charged out of the box, it will NOT need 14 hours to fully charge the first time.

STEP 3: While Justin is charging, the 4 blinking/flashing LED indicator lights will show the power level. When the case is fully charged, all 4 indicator lights will stay lit and the blinking/flashing will stop. See manual for further details.

STEP 4: To charge an iPad®, iPhone® or other device, use your device's specific charging cord (e.g. Apple® 30-pin or Lightning™ cable, Micro-USB cable, etc.) and connect it to the USB port of Justin. Plug the cable into your device. To begin charging your device, press the Power button on the case next to the LED indicator lights (*LED's will stay lit for 3 seconds.*)

STEP 5: Justin will charge your device until the device is fully charged or until Justin's internal battery has drained. To view how much battery life is left in Justin, press the power button next to the LED indicator lights.

Please Note: Not all mobile devices are the same in the way that they charge. Some instances, namely with BlackBerry® devices, REQUIRE you to use the included CHARGE ONLY Micro-USB to USB cable. Some Samsung® tablets REQUIRE you to use the included USB adaptor. See user manual for further details.
