

Quick Start Guide

STEP 1: Fully charge your Justin™ Power Case by plugging the Micro-USB end of the supplied charging cable into the Micro-USB port. Plug the USB end of the charging cord into the USB wall charger. Plug the charger into a wall outlet and Justin will automatically begin charging. **Please Note:** A typical charge from 0% to 100% will take approximately 7 hours. Justin is partially charged out of the box, it will NOT need 7 hours to fully charge the first time.

STEP 2: While Justin is charging, the 4 blinking/flashing LED indicator lights will show the power level. When the case is fully charged, all 4 indicator lights will stay lit and the blinking/flashing will stop.

STEP 3: To charge your device, use your device's specific charging cord (e.g. Apple® 30-pin or Lightning™ cable, Micro-USB cable, etc.) and connect it to the USB port of Justin. Plug the cable into your device. To begin charging, press the Power button next to the LED indicator lights (*LED's will stay lit for 3 seconds.*)

Every device is different in how it charges, please see manual for more detailed instructions/explanations.
