Model # IT-NP

3 Replacement Needles and LP Cleaning Cloth

How to Replace the Turntable Stylus:

The stylus should last about 50 hours under normal use. However, it is recommended that the stylus be replaced as soon as you notice a change in sound quality. Prolonged use of a worn-out stylus may damage the record. Records played at the highest speed of 78RPM will wear out the stylus quickest.

Removing the Old Stylus:

1. Set a screwdriver at the tip of the stylus and push downward (A).
2. Remove the stylus by pulling it simultaneously downward and forward.

Installing a New Stylus:

1. Hold the front tip of the stylus and insert its rear edge (B) first.
2. Push the stylus upward (C) until the tip locks into place.

Guide Pins (inside)

Caution:

- Do not bend the stylus.
- Keep out of reach of children.
- Do not touch the needle to avoid injury to your hand.
- Turn off the unit's power before you replace the stylus.

How to Clean Your Vinyl Record:

Vinyl records must be kept clean at all times for optimal music playback and to prevent damage to the stylus and record. Use the supplied cleaning cloth to gently remove dust, fingerprints, and any other debris. DO NOT get the cloth or vinyl record wet.

Handling Vinyl Records:

- Do not touch the record's grooves. Only handle records by the edges or the label with clean hands. Touching the record surface will cause your record's quality to deteriorate.
- To clean a record, use the supplied soft anti-static cloth to gently wipe the record surface.
- Keep records in their protective sleeves when not in use.
- Always store records upright on their edges.
- Avoid placing records in direct sunlight, close to a heat source (radiators, stoves, etc.), or in a location subject to vibration, excessive dust, heat, cold or moisture.
