

# SAFE & SOUND Model No. ITSS-9300

## PORTABLE SAFE

The Portable Safe can be used in a permanent location just like a conventional safe or carried when traveling and secured in a vehicle or in a suitable location at your destination. Simply passing the steel cable around a suitable fixed securing point and locking the cable end in place prevents the safe being opened or removed by unauthorized people.

## Installing the Battery

- (a) Ensure the Portable Safe is unlocked and the cable end is removed completely from the lock hole.
- (b) Pull out the storage tray and locate the battery cover on the inside of the storage tray. Remove the battery cover.
- (c) Gently pull the battery connector from inside the battery compartment and fit a high quality 9 volt (MN1604/6LR61) ALKALINE battery (not included).
- (d) Push the battery into the battery compartment and refit the battery cover (if the battery is not fitted correctly then the battery cover may not close properly - ensure battery is fully inserted into the battery compartment).

## Using the Portable Safe

1. Place your possessions in the storage tray of the Portable Safe. If you are storing an iPad (or similar tablet PC) or very small objects such as jewelry you must use the shelf card provided. Place the shelf card on the side supports inside the storage tray, ensuring it is completely **flat**. If storing an iPad (or similar tablet PC), fit the shelf card first and then place the iPad on the shelf card with the screen facing **downwards**. Gently push the storage tray back into the Portable Safe's outer casing until the lock hole in the storage tray aligns with the lock hole in the outer casing. Please note: If the storage compartment is too full then the tray may not close properly and you will have to remove or rearrange certain of your items.
2. Guide the cable around a fixed secure object, for example a water pipe, a railing, a bed frame, part of a vehicle chassis or heavy furniture.
3. Insert the end of the cable into the lock hole (make sure that it goes in all the way) and whilst holding the cable end still in place turn the key to lock it in position - you have just locked the cable and set the alarm. If the alarm sounds then the cable is not fully in the lock hole and you should turn the key back into the unlocked position and push the cable end in the lock hole further before trying again.
4. To test the alarm prior to use turn the key to the locked position without inserting the cable into the lock hole - the alarm siren should sound within a few seconds. If it doesn't then you should change the battery.

## \*\*\*TROUBLESHOOTING\*\*\*

### **Alarm doesn't sound or only makes a "clicking" sound when activated**

Check you have a high quality Alkaline battery installed. Check battery life.

### **When key is turned with the cable inserted in lock hole the alarm sounds**

Ensure the storage tray is fully inserted into the outer casing and the two lock holes are aligned. Ensure cable end is inserted all the way into the lock hole. You may also need to hold cable in lock hole at the same time as turning the key.

Disclaimer: The Portable Safe has been designed as a deterrent against theft. The manufacturer or supplier cannot accept any liability for personal injury, property damage or loss.

Warning: The Portable Safe has a very loud siren which may cause ear damage if used at close range and/or for prolonged periods of time. Do not hold close to ears and keep away from children.
