

## BLUETOOTH TROUBLESHOOTING

If your device is experiencing sound distortion, or a broken transmission signal during Bluetooth playback (either resting in the cradle, or being played from across the room), this may be a sign of interference.

1. Make sure your device (tablet or smartphone) is fully charged and within the proper Bluetooth transmission range of up to 33ft from the Tower Stereo.
2. Turn OFF any nearby devices that might be causing interference, such as TV's, radios, microwaves, etc...
3. Turn OFF the WIFI on your device (tablet or smartphone) as this may cause unwanted interference in some instances.
4. If your device is docked on the Tower Stereo cradle in vertical orientation, turning the tablet or smartphone to horizontal orientation should resolve the interference.
